# in Superior Quality Guttering Systems

NOW you can choose a Colorbond® Fascia Guttering System that is strong, watertight and economical

- Streamlined
- Watertight
- Combined leaf guard

## Superior Quality

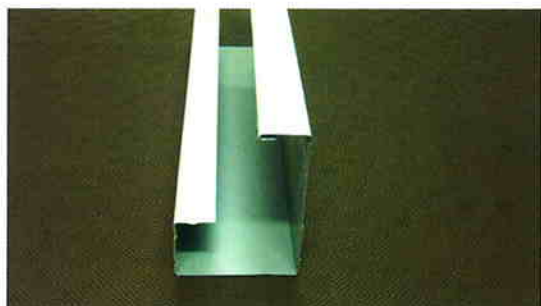

Spacespan Fascia Guttering Systems are made from .65mm gauge Colorbond Zincalume II Steel. This provides an economical benefit as they are able to be used as support beams.

They are available in a wide range of styles and colours so you are sure to find a colour to match your existing home.

## Matching Cast Gutter Corners

This feature gives a much better appearance as it eliminates unsightly mitre joints and the added convenience of the leaf guard. The integrated leaf guard fits neatly inside the guttering to prevent leaves clogging the downpipes, giving you greater leisure time as less maintenance is required.
