

SPACE SPAN

LIVING SYSTEMS

New streamlined, low maintenance COLORBOND® steel roofing with the

HORIZON 300

Now you can enjoy the timeless elegance of the innovative Horizon 300 flat deck roofing profile.

• Attractive • Strong • Durable

—The Roofing Profile of the Future—

The **Horizon 300™** is a single skin roofing option suitable for a wide range of glass room and patio applications. Its unique V-line structure provides a smooth, streamlined finish that is both attractive and low maintenance. It has been designed to enhance both contemporary and traditional architectural styles and may be used for either pitched or flat roofing systems.

Available in an unparalleled range of 12 colour combinations, the **Horizon 300™** offers a superior finish of 80% high gloss to both sides of the panel. This not only ensures a brighter finish, but with the added protection against the elements, reduces the need for maintenance.

Strong and Durable

Manufactured from Hi-Tensile Steel with a plastic corstrip on the underside and a weather proof joining system, the **Horizon 300™** is a highly durable roofing option that is fast and easy to erect and capable of achieving spans of up to 5.0m.

Therefore less posts and supporting beams are required, reducing costs and increasing the availability of valuable open space.

Fully Certified Engineering

As with all SpaceSpan products, the **Horizon 300™** is fully engineered to withstand the harshest weather conditions, even in tropical cyclone areas.
