

**SPACE SPAN**  
LIVING SYSTEMS

Enjoy the best of summer and winter living with the versatile SpaceSpan Queensland Room!

- *Low maintenance*
- *Easy to adjust*
- *Durable*

## ———— Ideal Climate Control ————

Custom design your SpaceSpan Queensland Room with your choice of horizontal sliding or vertically stacking panels.

The Horizontal panels are custom made to suit any size requirements. They slide open easily & conveniently to let in the cool air, or keep out inclement weather.

The Vertical full height opening panels lower individually, stacking up or down to create the ideal balance of fresh air and weather protection that you require or the season dictates. The unique design makes ventilation up to 75% possible!

In warm weather, the sashes can be fully removed for 100% cross flow ventilation while quality screening protects you from the insects. You can even choose Midgee Mesh to keep out those tiny insects like sandflies.

## ———— Perfect for All Seasons ————

A SpaceSpan Queensland Room provides the feeling of outdoor living with floor to ceiling panels designed to maximise your view with the added benefit of protection from inclement weather and annoying insects.

Taking advantage of extended time outside in your SpaceSpan Queensland Room helps to reduce your household heating & cooling costs.

For Winter warmth or Summer cooling, you'll find your Spacespan Queensland Room will be a stylish & practical addition to your home.

Tough resilient ClimaFilm™ won't shatter like glass providing a safe environment for families with active children or pets.

## ———— Low Maintenance & Long Lasting ————

The SpaceSpan Queensland Room panels readily lift out to allow for easy cleaning from the **inside** of the room. The panels feature resilient, weather resistant, tinted ClimaFilm and are so robust and durable that they come with a 10 year warranty!
