SpaceSpan Premium Rear-Receiver Attachment Channel

NOW you can enjoy the extra protection of the high strength, perfectly watertight revolutionary SpaceSpan Rear-Receiver Attachment Channel

- *Patented design*
- *Low maintenance*
- *Perfect water seal*

Durable and Secure

With a unique patented design, the SpaceSpan Rear-Receiver is constructed from solid extruded powder coated aluminium for maximum durability and strength. Specially designed with inbuilt weather seals and a foam insert that creates a pressure seal at the back, the SpaceSpan rear-receiver provides complete water protection around your patio.

Streamlined, Attractive Design

The innovative SpaceSpan rear-receiver back channel is designed for maximum visual appeal. With a concealed fixing strip that hides unsightly screw heads, it provides a better appearance from underneath than other rear-receiver systems.

Available in two convenient lengths and three popular colours, the SpaceSpan rear-receiver back channel is designed to suit both Classic and Horizon 300 styles of roof sheeting.

Added Storm Baffle Protection

For even greater weather protection, a moulded storm baffle may be added to the SpaceSpan rear-receiver. This specially designed insert will prevent water travelling uphill in high wind and storm conditions.

Fully certified engineering

As with all SpaceSpan products, the SpaceSpan Rear-Receiver back channel is fully engineered to withstand the harshest weather conditions, even in tropical cyclone areas.
